

## **Product Line Analyst Hydrogen**

### **JOIN US IN POWERING CHANGE**

We are looking for graduates who share our purpose to power progress and our culture of inclusion, collaboration, and care. We'll give you the support you need to forge your own path, and you'll have real responsibilities and meaningful projects to work on right from the start.

### **WHERE YOU FIT IN**

Shell wants to position hydrogen as a vector for clean energy transport and storage via shared infrastructure for value chain and end use integration and aggregation to obtain economies of scale for deployment in commercial fleets, heavy duty transport, and hard-to-abate industries and geographies. Hydrogen has tremendous growth ambitions to rapidly build a material position in the market.

The short-term focus is to establish a replicable, supportable business that is expected to then rapidly scale, as internal and significant external investment is expected in the sector. New innovative industry leading products are currently in concept, discovery and development, enabled by our Hydrogen digital and data platform built out as the backbone to support the business model.

You will report into the Hydrogen Product Line Manager and will play a pivotal role in achieving the Hydrogen Business ambitions. You are part of the broader R&ES IDT community.

### **WHAT'S THE ROLE?**

As a Hydrogen Product Line Analyst, you will be responsible for the value delivery of various products to the business. You will support Hydrogen IT activities by leading business analysis, research activities and stakeholder engagements. You will partner with Business Product Owners and IT Partners to contribute to the product strategy and roadmap, execute the product vision, identify the best technology/solutions to solve business problems and collaborate with the digital teams throughout the product lifecycle.

### **WHAT WE NEED FROM YOU**

Communication and stakeholder management skills are essential to effectively engage with team members and business stakeholders to identify and deliver opportunities for digitalisation and innovation.

Business analysis and critical thinking are key to gather needs and requirements and to be able to provide framing to the opportunity through critical thinking and analysis techniques.

Affinity with Information Technology to be able to provide technology/innovation advisory to ensure that right innovative

technologies are offered as possible ideas to solve complex business problems.

Master degree in IT, Engineering or Business

It is **NOT** necessary to be able to code
